

Ros 2 humble

Initially I have a problem on building the program using colcon, because of the difference between colcon and catkin. I look online for a help and they mentioned that I would have to remove one of the line in CmakeLists.txt in order for me to be able to compile this program

```
jonathan@jonathan-ThinkPad-T480:~/ros2_ws2$ colcon build
[0.444s] WARNING:colcon.colcon_core.package_selection:Some selected packages are already built in one or more underlay workspaces:
  'turtlesim' is in: /opt/ros/humble
If a package in a merged underlay workspace is overridden and it installs headers, then all packages in the overlay must sort their include directories by workspace order. Failure to do so may result in build failures or undefined behavior at run time.
If the overridden package is used by another package in any underlay, then the overriding package in the overlay must be API and ABI compatible or undefined behavior at run time may occur.

If you understand the risks and want to override a package anyways, add the following to the command line:
  --allow-overriding turtlesim

This may be promoted to an error in a future release of colcon-override-check.
Starting >>> turtlesim
Finished <<< turtlesim [25.9s]

Successfully build the publisher and listener node using python:

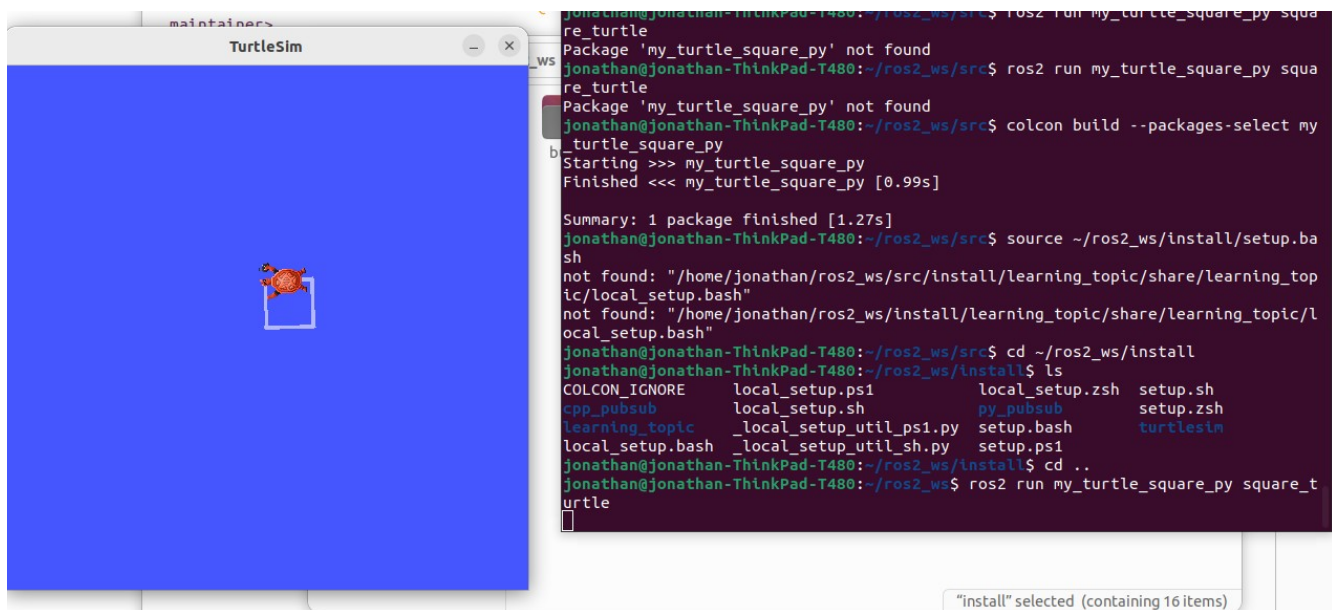

A terminal window titled 'jonathan@jonathan-ThinkPad-T480: ~/ros2_ws' displays the output of a ROS2 publisher node. The output consists of 16 lines of log messages, each starting with '[INFO]' followed by a timestamp, the node name 'minimal_publisher', and the action 'Publishing: "Hello World: ' followed by a sequence number from 113 to 128. The terminal has a dark background with light-colored text. The window title bar shows standard Linux window controls (minimize, maximize, close) and a search icon. The terminal tabs show the current directory as '~/ros2_ws' and the user as 'jonathan@jonathan-ThinkPad-T480'.

```

I have a success using python instead of a c++ code to make the turtle to create a square
It took a while, but I was able to create the turtle to create the square.

I have to change several stuffs such as:

```
<exec_depend>rclpy</exec_depend>
<exec_depend>std_msgs</exec_depend>
```

on package.xml

we also need to add the entry point like described below:

```
22     'console_scripts': [
23         'square_turtle = my_turtle_square_py.square_turtle:main'
24     ],
25 },
26 )
```

python code:

```
import rclpy
from rclpy.node import Node
from geometry_msgs.msg import Twist

class SquareTurtle(Node):
    def __init__(self):
        super().__init__('square_turtle')
        self.publisher_ = self.create_publisher(Twist, 'turtle1/cmd_vel', 10)
        self.timer = self.create_timer(2, self.publish_square)
        self.counter = 0

    def publish_square(self):
        vel_msg = Twist()
        if self.counter % 4 == 0:
            vel_msg.linear.x = 1.0
        elif self.counter % 4 == 1:
            vel_msg.angular.z = 1.5708 # 90 degrees in radians
        elif self.counter % 4 == 2:
            vel_msg.linear.x = 1.0
        elif self.counter % 4 == 3:
            vel_msg.angular.z = 1.5708 # 90 degrees in radians

        self.publisher_.publish(vel_msg)
        self.counter += 1

def main(args=None):
    rclpy.init(args=args)
    square_turtle = SquareTurtle()
    rclpy.spin(square_turtle)
    square_turtle.destroy_node()
    rclpy.shutdown()

if __name__ == '__main__':
    main()
```
