Lecture 1: Mobile Autonomous Robots

Introduction

Outline

□ Mobile Autonomous Robots Introduction

- Robot software platform
- Need and future
- About ROS
- Features of ROS
- Configuring the ROS development environment
- ROS installation
- ROS operation test

What do These Two Things Have in Common

Personal Computer

Personal Phone

Hardware Modules Enable Various Combinations

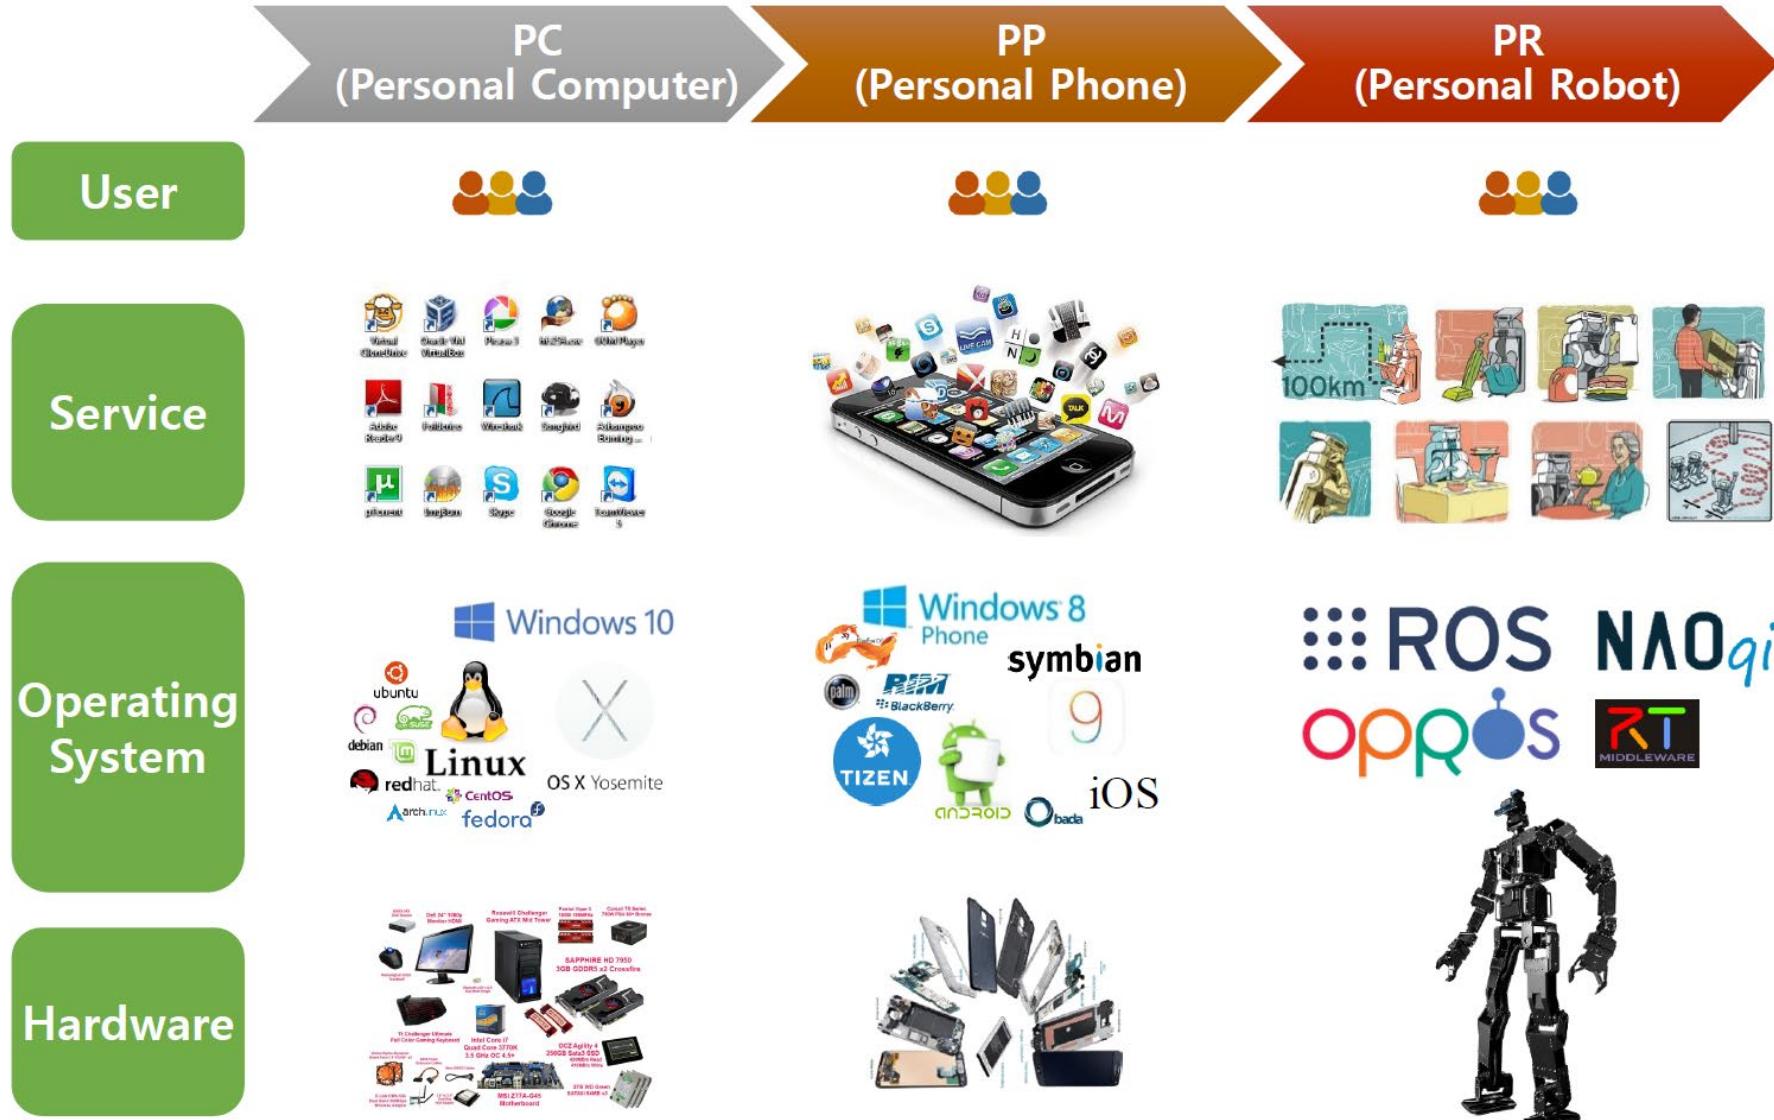

Personal Computer

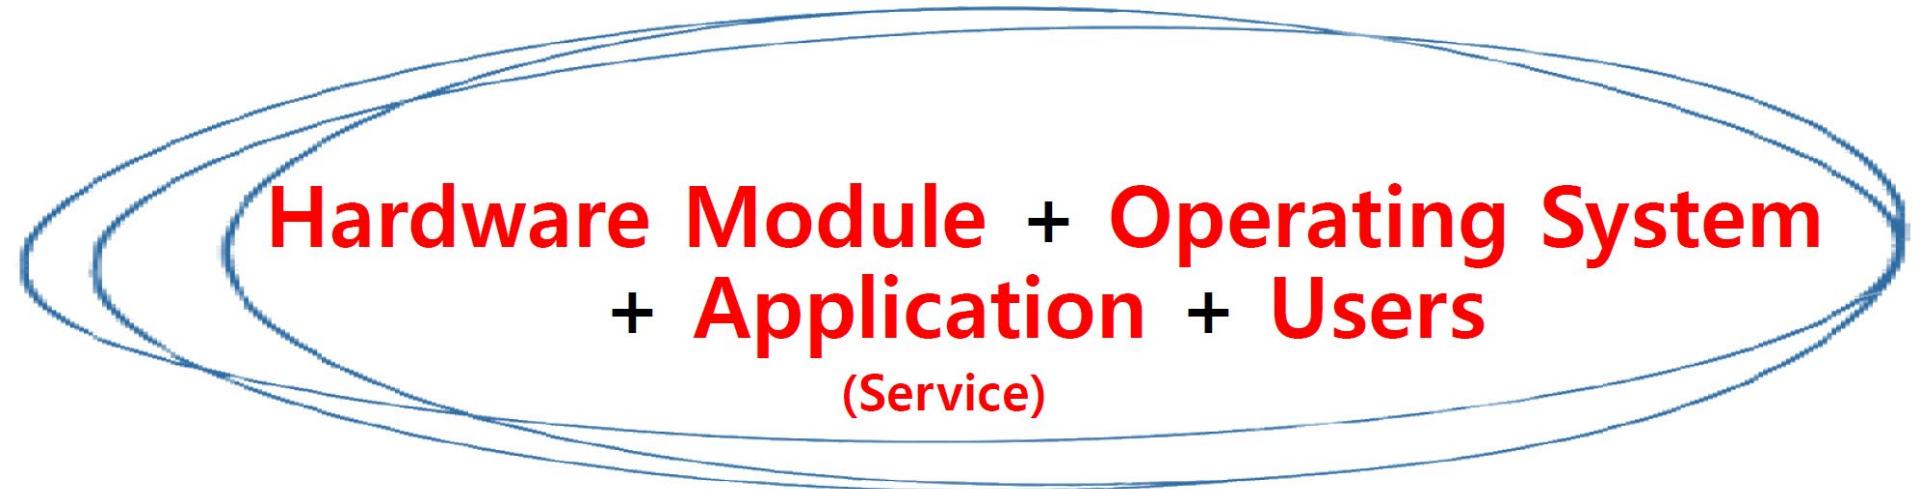

Personal Phone

Ecosystems

Division of Labor in Product Ecosystem

**Hardware Module + Operating System
+ Application + Users
(Service)**

Operating System and Application

Personal Computer

Personal Phone

Changes Brought by the Software Platform

[The first commercially available mobile phone (?) In 1983 Motorola DynaTAC 8000 and developer Martin Cooper, and the evolution of mobile phone]

Changes Brought by the Software Platform

- Hardware interface integration

- Hardware abstraction, standardization, and modularization

- Price ↓, Performance ↑

- Separation of hardware, operating system and application

iOS

- Focus on services that meet your needs!

- User increases! Purchase and feedback, forming a new ecosystem

Various Robot OS

Major Robot Operating System

Future Robot Software Platform

- Establish **an interface** between the hardware platform and the software platform
- **Modular hardware** platform proliferation
- Applications can be written without knowledge of hardware
- More **software personnel** can enter the robotics field and participate in the robotics product
- Focus on **services** to be provided to users
- Formation of **User** layer and **feedback** by delivering demanded service
- An opportunity for the rapid advancement of robot development

About ROS

ROS is an open-source, meta-operating system for your robot. It provides the services you would expect from an operating system, including hardware abstraction, low-level device control, implementation of commonly-used functionality, message-passing between processes, and package management. It also provides tools and libraries for obtaining, building, writing, and running code across multiple computers.

<http://www.ros.org/wiki/>

Software Framework

- Software framework for developing robot software
 - It is possible to jointly develop complex programs by finely dividing them with message exchanging method between nodes.
 - Supports command tool, visualization tool Rviz, GUI toolbar rqt, 3D simulator Gazebo
 - Supports modeling, sensing, recognition, navigation, and manipulation functions commonly used in robotics
 - Create Robotics Ecosystem!

Purpose ROS

Building an **ecosystem** that enables
robotics software development to be
collaborated on a global level!

Is ROS a New OS

- **Operating System**
 - **General purpose computer**
 - Windows(Windows XP, 7, 8 ...)
 - Linux(Ubuntu, Redhat, Fedora, Mint, Gentoo ...)
 - MAC(OS X ...) etc
 - **Smart phone**
 - Android, iOS, Windows Phone, Symbian, RiMO, Tizen etc
- **ROS** = Robot Operating System
- **ROS** is Meta-Operating System

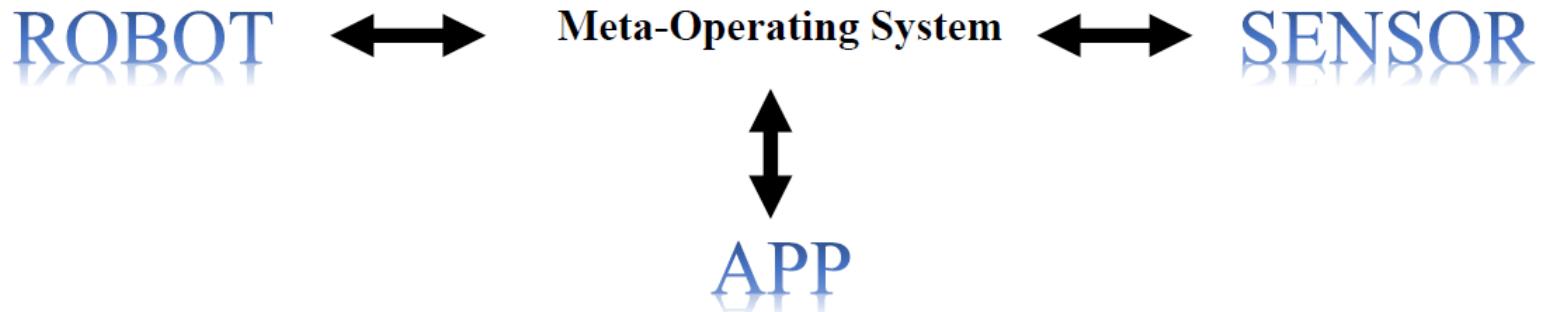

Meta- Operating System

- Meta-Operating System (Meta-Operating System): It is not a precisely defined term but it can be regarded as a system that performs scheduling, loading, monitoring, error handling and utilizing distributed computing resources as a virtualization layer between applications and distributed computing resources.
- It is not a traditional operating system like Windows, Linux, and Android. Rather, ROS uses the traditional operating system (Linux, Windows, OS-X, and Android).
- It uses the existing operating system's process management system, file system, user interface, program utilities (compiler, thread model, etc.). In addition, it provides essential functions for developing robot application software such as data transmission / reception, scheduling and error handling among many different types of hardware in a library form.
- In addition, it develops, manages and provides various application programs based on the robot software framework, and has an ecosystem that distributes packages developed by users.

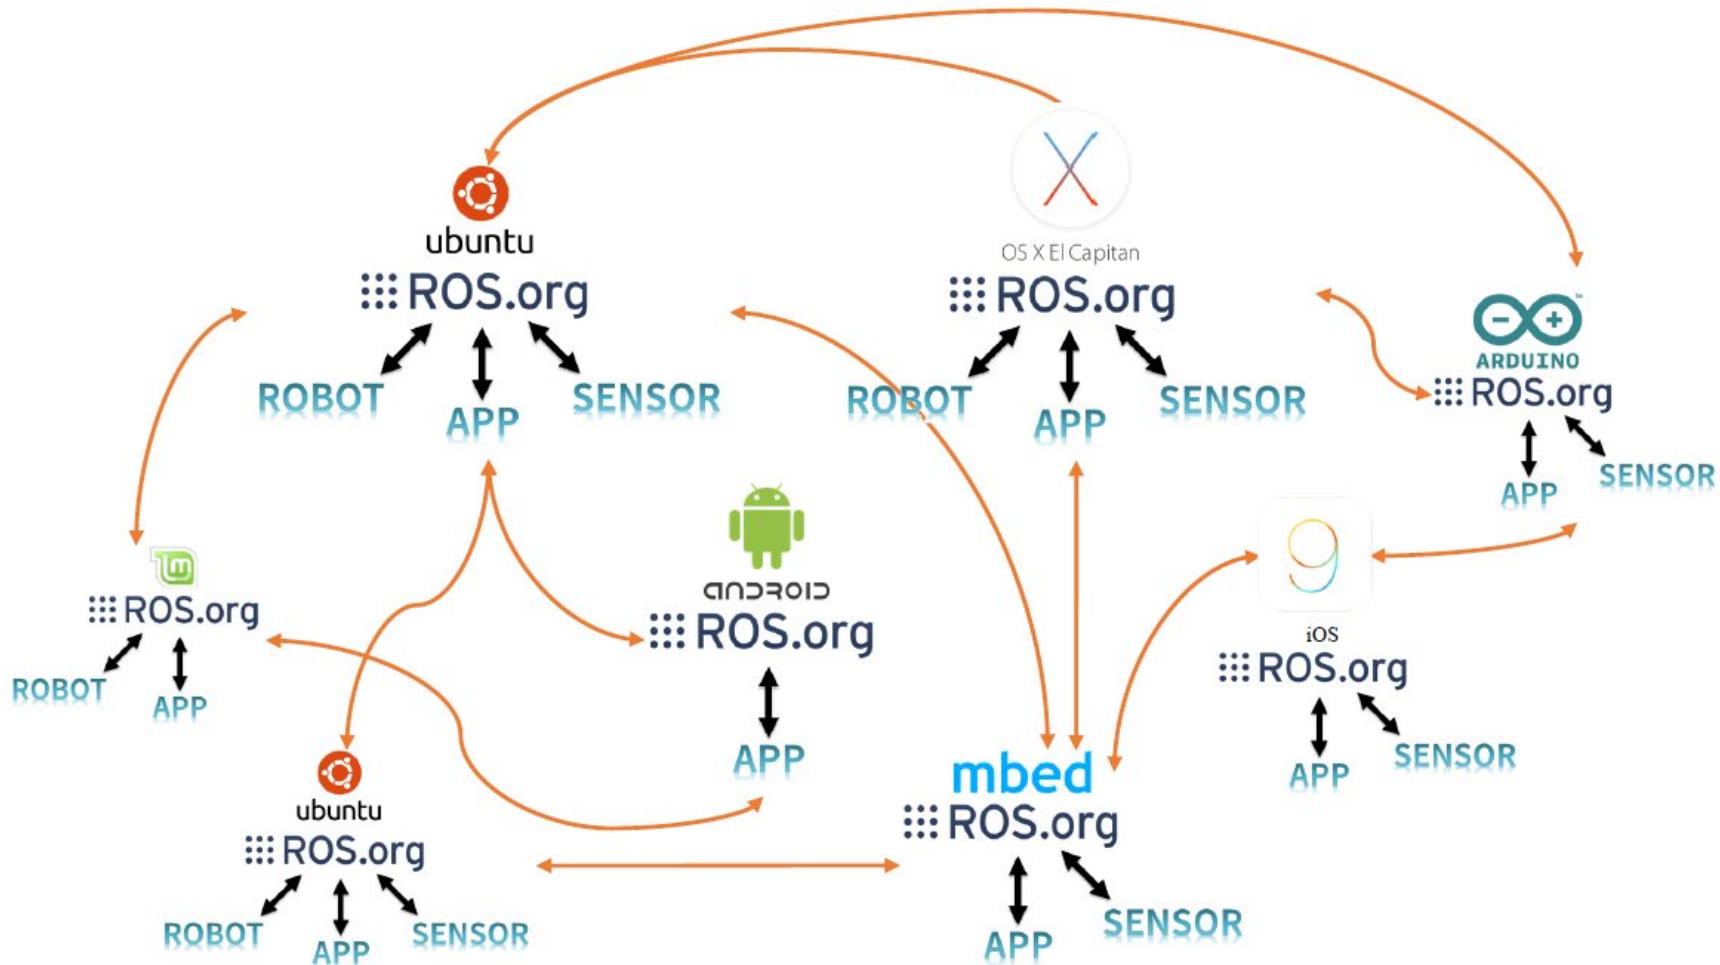

Meta- Operating System

Device drivers, libraries, debug tools, message communication
Drivers, compilation tools, installers, package creation and release

Support Communication Between Different Devices

ROS-enabled Operating System

▪ Traditional operating system

- Ubuntu, OS X, Windows, Fedora, Gentoo, OpenSUSE, Debian, Raspbian, Arch, and QNX Realtime OS. (There can be functional limitations in some OS)
- Partially available for Android and iOS, smartphone operating systems
- In case of microcontroller unit (MCU) which can not be equipped with OS, it provides a library to communicate via serial communication, Bluetooth, and LAN
- Basically it is recommended to run on **Ubuntu**, OS X!

ROS 2.0 supports
three major
operating systems

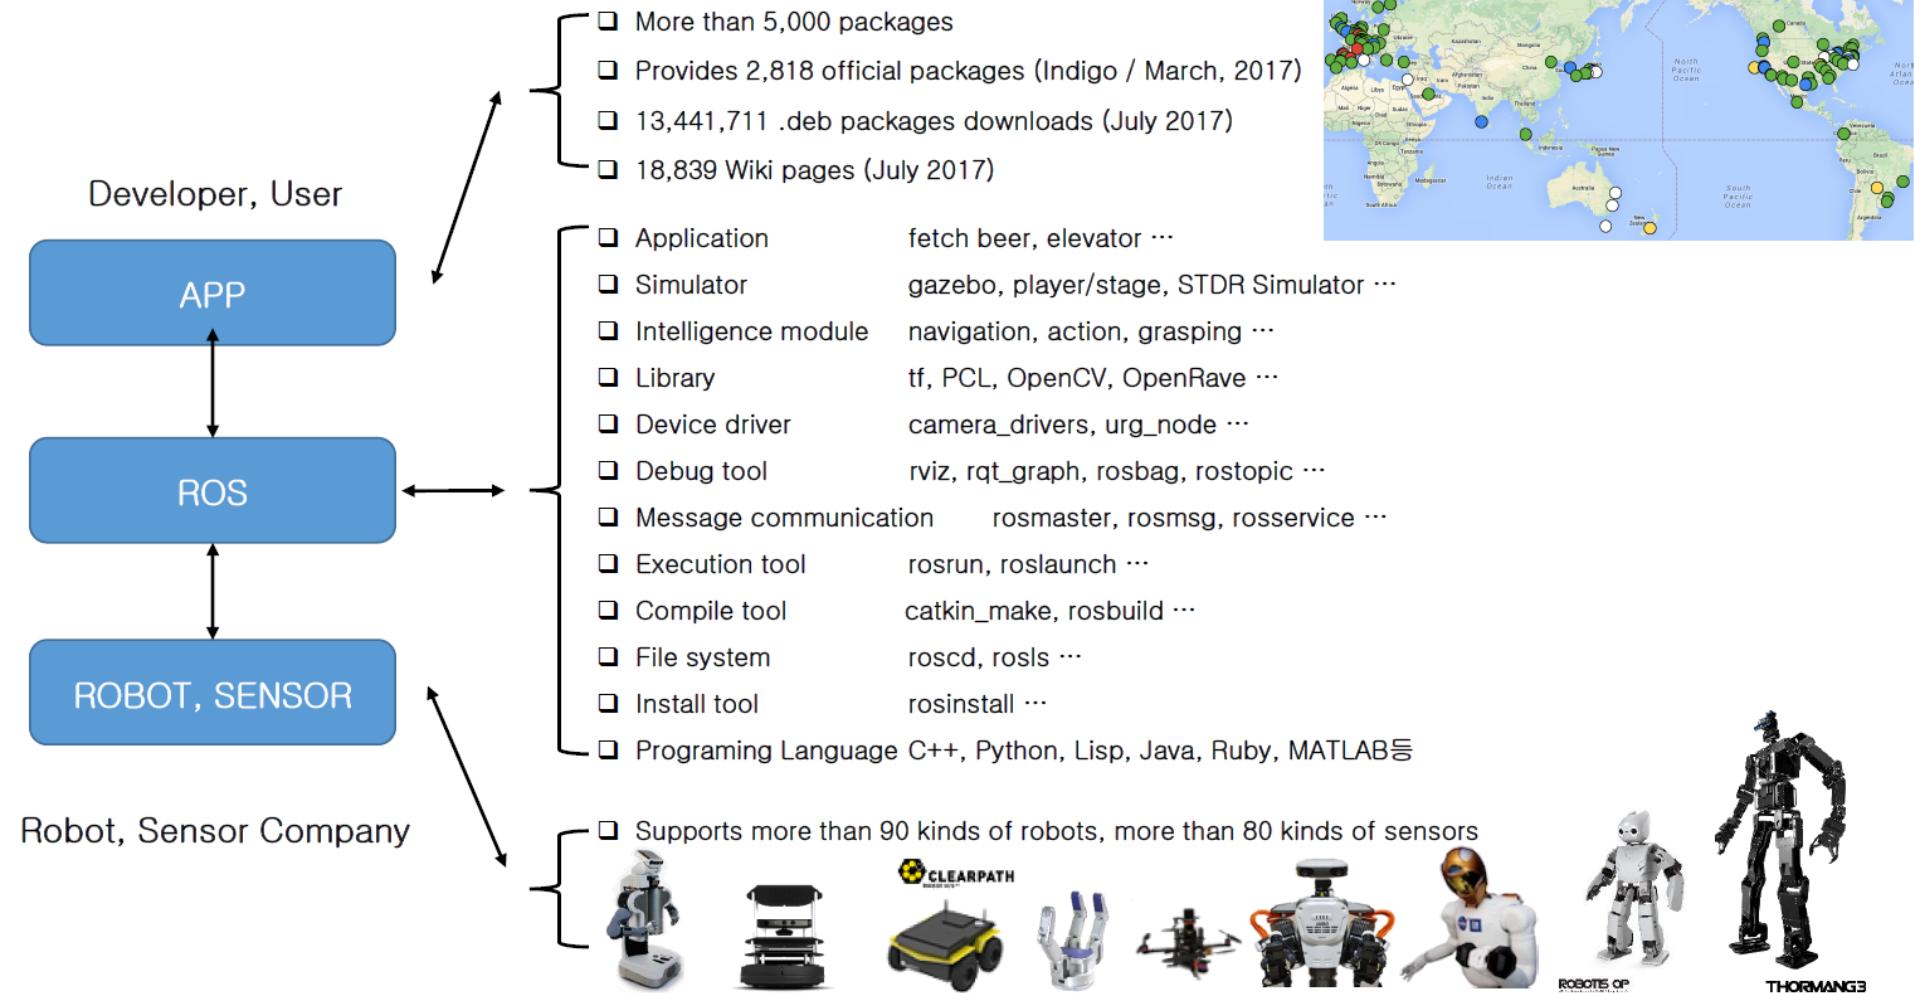

ROS Configuration

Client Layer	roscpp	rospy	roslisp	rosjava	roslibjs		
Robotics Application	MoveIt!	navigatioin	executive smach	descartes	rospeex		
	teleop pkgs	rocon	mapviz	people	ar track		
Robotics Application Framework	dynamic reconfigure	robot localization	robot pose ekf	Industrial core	robot web tools	ros realtime	mavros
	tf	robot state publisher	robot model	ros control	calibration	octomap mapping	
	vision opencv	image pipeline	laser pipeline	perception pcl	laser filters	ecto	
Communication Layer	common msgs	rosbag	actionlib	pluginlib	rostopic	rosservice	
	rosnode	roslaunch	rosparam	rosmaster	rosout	ros console	
Hardware Interface Layer	camera drivers	GPS/IMU drivers	joystick drivers	range finder drivers	3d sensor drivers	diagnostics	
	audio common	force/torque sensor drivers	power supply drivers	rosserial	ethercat drivers	ros canopen	
Software Development Tools	RViz	rqt	wstool	rospack	catkin	rosdep	
Simulation	gazebo ros pkgs	stage ros					http://wiki.ros.org/APIs

ROS Versions

Distro	Release date	Poster	Tutorials, turtle in tutorials	EOL date
ROS Melodic Mirroreye (Recommended)	May 23rd, 2020			May 2025 (Focal EOL)
ROS Lunar Loggernaud	May 23rd, 2017			June 27, 2023 (Bionic EOL)
ROS Kinetic Kame	May 23rd, 2016			April 2021 (Xenial EOL)
ROS Jade Turtle	May 23rd, 2015			May 2017
ROS Indigo Iago	July 22nd, 2014			April 2019 (Trusty EOL)
ROS Hydro Modesta	September 4th, 2013			May 2015
ROS Groovy Grapagos	December 31, 2012			July 2014
ROS Fuerte Furtis	April 23, 2012			April 2019 (Trusty EOL)
ROS Electric Enya	August 30, 2011			May 2015
ROS Diamondback	March 2, 2011			—
ROS C Turtis	August 2, 2010			—
ROS Box Turtis	March 2, 2010			—
ROS Box Turtle	—			—

Current ROS Ecosystem

Current ROS Ecosystem

Feature of ROS

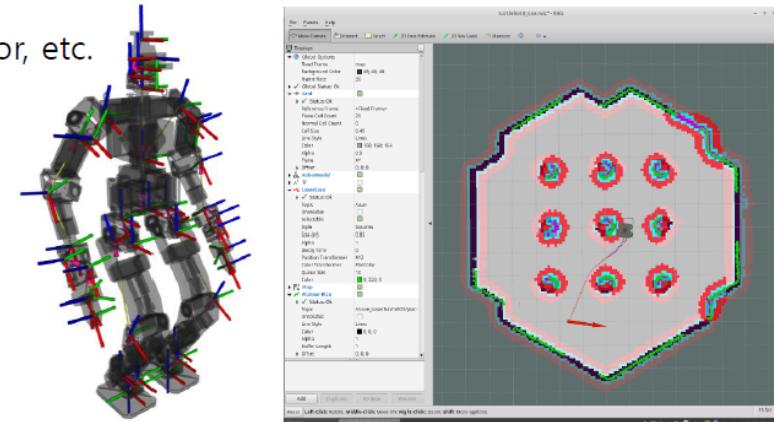

□ Communication infrastructure

- Provides data communication between nodes
- Support for message transfer interface, which is commonly referred as the middleware
- **Message parsing function**
 - Provides communication system frequently used in robot development
 - Message transfer interface between nodes facilitating encapsulation and code reuse
- **Message Record and Play**
 - Messages that are transmitted/received between nodes can be stored and reused as needed
 - It is possible to repeat an experiment based on stored messages, and it is easy to develop algorithm
- **Use of various programming languages due to the use of messages**
 - Since data exchange between nodes use messages, each node can be written in different languages
 - Client libraries: roscpp, rospy, roslib, rosjava, roslua, rosjava, roseus, PhaROS, rosR
- **Distributed parameter system**
 - Variables used in the system are created as global key values so they can be shared, modified and applied in real-time

Feature of ROS

□ Various functions related to robots

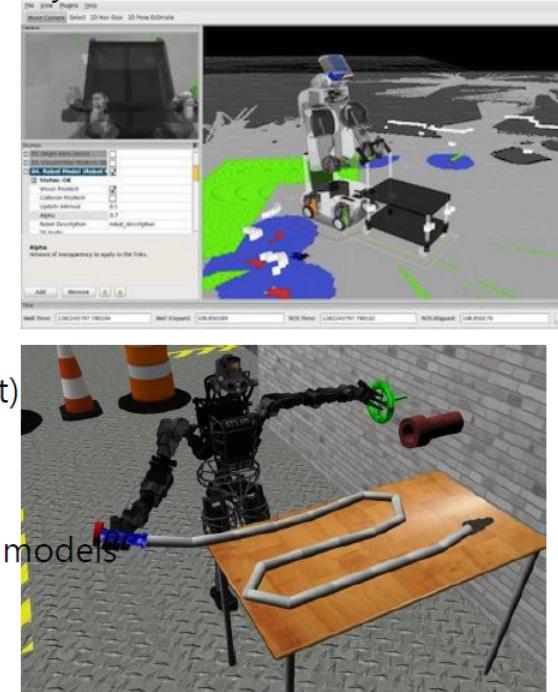

- Define a standard message for a robot
 - Modularization by defining standard message such as camera, IMU, laser sensor / odometry, navigation data such as route and map, inducing collaborative work, and improving efficiency
- Robot geometry library
 - Provides TF to calculate the relative coordinates of robot, sensor, etc.
- Robot description language
 - XML document describing physical characteristics of the robot
- Diagnostic system
 - Provides diagnostic system to grasp the state of the robot
- Sensing / recognition
 - Sensor drivers, libraries for sensing / recognition
- Navigation
 - Estimation of poses (position / posture) of robots commonly used in robots, provision of self position estimation in the map
 - SLAM required for map creation, and Navigation library for navigating to destinations within the created map
- Manipulation
 - Provides various Manipulation libraries to support IK and FK used in robot arm as well as pick and place of application
 - Provides GUI manipulation tools (MoveIt!)

Feature of ROS

□ Various development tools

- Provides various development tools needed for robot development
- Improving the efficiency of robot development
- **Command-Line Tools**
 - Access to the robot and use ROS functions only with commands provided by ROS without GUI
- **RViz**
 - Provide powerful 3D visualization tool
 - Visualize sensor data such as laser, camera, etc.
 - Represent robot outline and planned motion
- **RQT**
 - Provides Qt-based framework for developing graphic interface
 - Displays connection information among nodes (rqt_graph)
 - Values such as encoder, voltage, numbers that change over time (rqt_plot)
 - Records and plays data in the form of message (rqt_bag)
- **Gazebo**
 - 3D simulator with physics engine. Supports robot, sensor, environmental models
 - Highly Compatible with ROS

ROS Application Development Environment

- Hardware: Desktop or laptop using Intel or AMD processor**
- Operating System: Ubuntu 20.04.6 LTS**
- ROS: Noetic Ninjemys**

ROS Installation

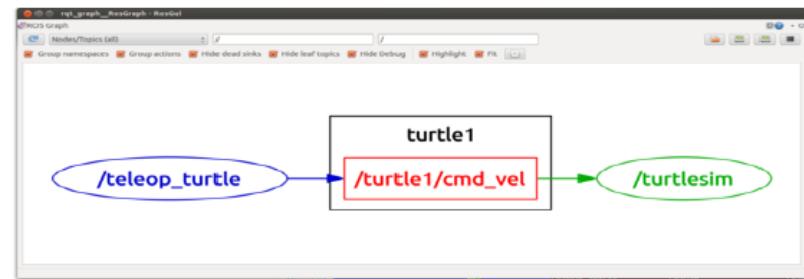

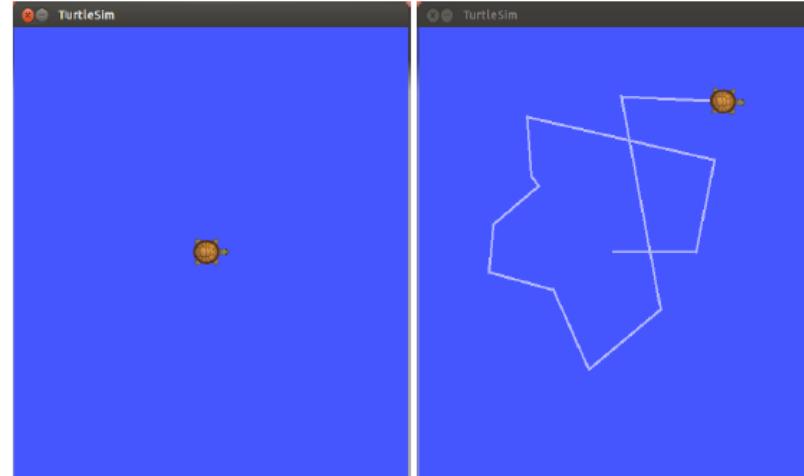

□ ROS Installation

- <http://wiki.ros.org/noetic/Installation/Ubuntu>
- Appendix A
- Appendix B

□ ROS environment setting

ROS Operation Test

- turtlesim package
- roscore
- rosrun turtlesim turtlesim_node
- rosrun turtlesim turtle_teleop_key
- rosrun rqt_graph rqt_graph

Integrated Development Environment (IDE) Available on ROS

- <http://wiki.ros.org/IDEs>
- Recommendation 1 : **Qtcreator** + [Qt Creator Plugin for ROS](#)
 - Install: sudo apt-get install qtcreator
 - Advantage: Can be Used as 'CmakeLists.txt', Easy to develop 'rqt plug-in' & 'GUI'
- Recommendation 2 : **Visual Studio Code** + [ROS Extension](#)
 - Install: <https://code.visualstudio.com/>
 - Advantage: A light text editor oriented, Fast
 - Similar to 'Atom', 'Sublime Text', 'Clion' etc.
- Recommendation 3 : **Eclipse**
 - Install: <http://www.eclipse.org/>
 - Advantage: A familiar IDE that many people use (but, Heavy!)

Integrated Development Environment (IDE) Available on ROS

The screenshot shows the Qt Creator Integrated Development Environment (IDE) interface. The main window displays several tabs of C++ code:

- tms_db_publisher.cpp**: Contains code for a publisher, including a constructor and a method `getDbCurrentInformation()`.
- tms_db_writer.cpp**: Contains code for a writer, including a constructor and a method `writeData(int32_t id)`.

The sidebar on the left shows the project structure:

- Projects**: Shows the current project is `tms_db_manager [develop]`.
- src**: Contains files `tms_db_manager.cpp`, `tms_db_publisher.cpp`, `tms_db_reader.cpp`, and `tms_db_writer.cpp`.
- Outline**: Shows the class hierarchy and member variables for `DBPublisher`.
- Open Documents**: Shows the files `tms_db_manager.cpp`, `tms_db_publisher.cpp`, `tms_db_reader.cpp`, and `tms_db_writer.cpp`.

The bottom navigation bar includes tabs for **Issues**, **Search Results**, **Application Output**, **Compile Output**, **QML/JS Console**, and **General Messages**.

```
109     ~DbPublisher()
110     {
111         ROS_ASSERT(shutdownDbPublisher());
112     }
113
114     //-
115     void getDbCurrentInformation()
116     {
117         nh_priv.getParam("is_debug", is_debug);
118
119         tms_msg[db]::Tmsdb temp_dbdata;
120         char select_query[1024];
121
122         current_environment_information.tmsdb.clear();
123
124         //-
125         for (uint32_t i = 0; i < 7; i++)
126         {
127             sprintf(select_query, "SELECT * FROM rostmsdb.data_%s WHERE state!=0");
128             if(is_debug) ROS_INFO("%s\n", select_query);
129
130             mysql_query(connector, select_query);
131             result = mysql_use_result(connector);
132
133             if (result == NULL)
134             {
135                 temp_dbdata.note = "Wrong request! Try to check the query";
136                 return;
137             }
138
139             while ((row = mysql_fetch_row(result)) != NULL)
140             {
141                 for(int32_t j=0;j<25;j++) if(is_debug) ROS_INFO("%s, ",row[j]);
142                 temp_dbdata.time = row[0];
143                 temp_dbdata.type = row[1];
144                 temp_dbdata.id = atoi(row[2]);
145                 temp_dbdata.name = row[3];
146                 temp_dbdata.x = atof(row[4]);
147                 temp_dbdata.y = atof(row[5]);
148                 temp_dbdata.z = atof(row[6]);
149                 temp_dbdata.rr = atof(row[7]);
